                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 73-80: 100pp; English.
This sequence encodes a novel humae macrophage stimulating protein, MSP, receptor (the RON receptor) which is used in a method for the prophylactic treatment of a tumour derived from acaroendocrine cells (NEC) by administration of this MSP to a subject at risk, sufficient to induce apoptosis of ROC expressing a RON receptor (the receptor for MSP). The method is especially used to treat or prevent small cell lung cardinoma and apoptosis of RON-expressing cells may be iaduced in vivo or in vitto. Screening NEC from a subject for susceptibility to MSP-induced apoptosis is used to identify patients who will benefit from treatment with the MSP protein. MSP is already known for treating pathogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          infections, for stimulating thrombocyte production and megakaryocyte maturation (for treating thrombocytopaenia) and for stimulating growth of cells (particularly hepatocytes) 1384 C; 1309 G; 986 T; Sequence 4541 Bp; 662 A; 1384 C; 1309 G; 986 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MSP; macrophage stimulating protein; apoptosis; human; treatment; neuroendocrise cell; RoN receptor; small cell lung cardinoma; tumour; pathogen infection; thrombocyte production; megakaryocyte maturation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        alignment_scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
```

the nucleotide sequences SEQ ID NO:1 to 391 (V52134 to V52524) recorded on 1t. or a representative fragment or a sequences at least 5% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEO ID NO:1 to 391 (V52134 to V52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in STO ID NO: 1 that by this dentifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating in diagnosis kits and assays, and pharmaceutical invention describes a computer readable medium which has de sequences SEQ ID NO:1 to 391 (V52134 to V52524) recor . The present Invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO: 1 to 391 (V5234 to V5524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences of the SEQ ID NO: 1 to 391. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO: 1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO: 1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g fragments of the or expression modulating
